

FTTH Council Europe comments on Greece's broadband plans: Public money should be invested in full fibre-access future-proof solutions

"Following the recent announcements, the FTTH Council Europe is pleased to hear that fibre broadband infrastructure is getting back on the agenda in Greece, to ensure citizens and businesses have access to future-proof communication networks that can boost the economy and serve as solid ground for further development. At the same time the FTTH Council Europe hopes that all the new plans fully focus on fibre to the home solutions, avoiding inadequate and limited interim solutions based on copper. It is important that any network that is built using public money should be future-proof and therefore offering full fibre access solutions."

Hartwig Tauber, Director General of the FTTH Council Europe
